#### RI TRUCK COUNT AND ASSESSMENT STUDY

The U.S. Environmental Protection Agency (EPA), Region 1 planned a two-phase Truck Count and Assessment study for the Providence Port Area of Rhode Island.

- Phase I Develop an inventory of medium and heavyduty freight trucks (Class 5-8) and the activity they engage in while serving businesses/facilities in the working port area.
- Phase II Identify potential strategies to reduce air emissions, noise and congestion from heavy-duty trucks and their activity.

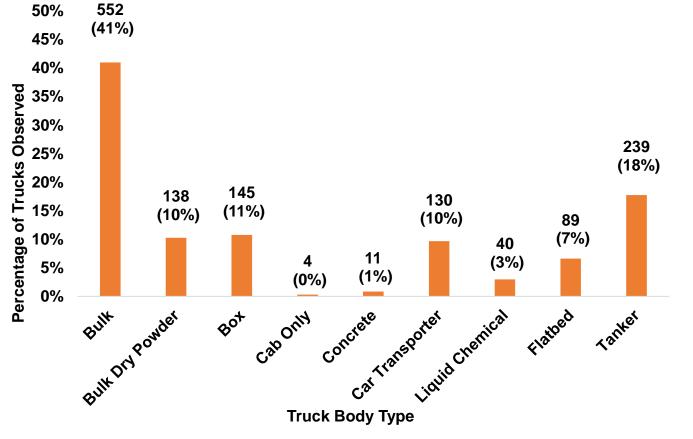

## **Project Background**

- EPA is working with state, local, and community stakeholders as part of the national Ports Initiative
- Collected data will assist EPA and its partners with their goals
- The Project is focused on Port truck operations

#### Phase I Results

- Phase I was completed in September and involved Port Business and Stakeholder Interviews and Truck Volume and Type Data Collection
  - Bulk Carriers and fuel tankers constituted the majority of trucks observed (Class 7 and 8)
  - Trucking in the study area is conducted by a wide range of companies, often contracted by port businesses.

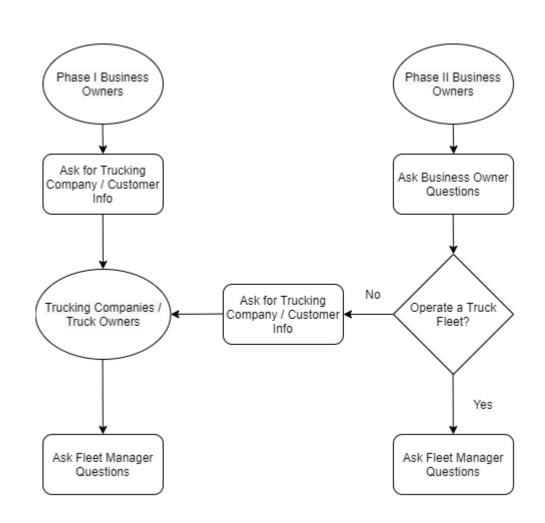

**Phase I - Combined Truck Body Types Recorded** 

#### Phase II Data Collection Process Overview

- Interviews were used to elicit responses from three groups:
  - Port Area Businesses (Continuation of Phase I Scope)
  - Fleet Managers
  - Drivers
- Driver Interviews were conducted at four locations at ProvPort:
  - McInnis Cement
  - Grimaldi Export Car Terminal
  - Schnitzer Northeast
  - ProvPort central parking area

#### **Data Collection Process Overview**

- Fleet Managers may work at trucking companies, or Port Businesses that operate a trucking fleet.
- Fleet Managers were identified through referrals from Port businesses, the Rhode Island Trucking Association, and USDOT data

**Interview Process** 

## Phase II Interview Subjects

#### **PORT BUSINESSES INTERVIEWEES**

- Hudson Terminal
- Harsco Recycling (Stericycle)
- SIMS Metal Management
- Schnitzer Steel Industries
- Lehigh Cement

#### **FLEET MANAGER INTERVIEWEES**

- DJ Cronin
- Kafin Oil
- Henry Oil
- Schnitzer Steel Industries
- Mid-America Salt
- JP Noonan

- Univar Solutions USA, Inc.
- B&B Trucking
- Lehigh Salt
- E. Constantini Trucking, Inc.
- Morton Salt

#### Interview Results – Business Owner Interviews

- Five additional Business Owners interviewed: increased breadth of business types
- Similar results to Phase I Interviews
- Schnitzer was the first business owner interviewed that operates its own truck fleet in Providence
  - All others contract to trucking companies or customers pick-up
- Most businesses do not dictate routes to trucking companies, and do not utilize scheduling windows or appointment systems

## Interview Results – Fleet Manager Interviews

- Fleet managers for the following business types were interviewed:
  - 3 trucking companies (1 general, 1 bulk, 1 gasoline)
  - 2 heating oil companies
  - 3 Port Businesses (1 metal, 1 salt, 1 chemicals)
- Trucking companies serve multiple customers at the port, and heating oil companies purchase from multiple terminals
- Truck ages ranged from new to 24 years in age, with an average age of 7 years

| Company Type               | National Firm<br>(Trucks in<br>Other Markets) | Trucks Owned<br>(Providence /<br>New England<br>Area) | Average<br>Truck Age | Newest<br>Truck<br>Year | Oldest<br>Truck<br>Year |
|----------------------------|---|---|----------------------|-------------------------|-------------------------|
| Heating Oil                |   | 3   | 10                   | 2020                    | 2002                    |
| Heating Oil                |   | 6   | 7                    | 2020                    | 1998                    |
| General Trucking           |   | 400   | 3                    | 2021                    | 2004                    |
| Bulk Hauling               |   | 16  | 15                   | 2019                    | 1996                    |

| Chemical Distribution      | Yes   | 24  | 4                    | 2017                    | 2015                    |

Company Type, Fleet Size, and Truck Ages for Fleet Manager Interviewees

## Interview Results – Fleet Manager Interviews

- Only two interviewed companies have anti-idling technology on their trucks
- Four of the companies do subcontract to owner-operators or other trucking companies
- Trucks make 1 to 4 trips per day to the port depending on the business and season

| Company Type               | Trucks Owned<br>(Providence /<br>New England<br>Area) | Trips Per Day  | Repeat Trips to Port per<br>Truck per Day                           |  |
|----------------------------|---|--|---|--|
| Heating Oil                | 3   | 3 to 6   | 1 to 2 loads per truck (2 loads in busy season)                     |  |
| Heating Oil                | 6   | 6  | 1 load per truck  |  |
| General Trucking           | 400   | 60   | Up to 4 loads per truck   |  |
| Bulk Hauling               | 16  | 216 to 254 at<br>peak times<br>(cobble ship in<br>port, winter salt<br>operations) | 4 loads a day for aluminum oxide, multiple loads for other products |  |
| Gasoline Tanker<br>Company | 25  | Up to 40   | 2 to 4 loads per truck depending on volume                          |  |
| Metal Recycling            | 12  | Did not answer   |   |  |
| Chemical Distribution      | 24  | Normally 1 per truck   | Sometimes 2 trips per driver  |  |

**Trips to Providence Port Area per Day per Company** 

## Interview Results – Fleet Manager Interviews

- Routes vary widely, especially for trucking companies that serve multiple customers
- 90-100% of back hauls are empty hauls
- Three companies had truck replacement strategies, and three were familiar with incentive programs to fund cleaner trucks

| Company<br>Type               | Trucks Owned<br>(Providence /<br>New England<br>Area) | Average<br>Truck Age | Replacement Policy  | Purchasing<br>Challenges | Familiar with Incentive<br>Programs?      |
|-------------------------------|---|----------------------|---|--------------------------|---|
| Heating Oil                   | 3   | 10                   | None  | Cost                     | Unfamiliar, would be interested           |
| Heating Oil                   | 6   | 7                    | No set policy, replace as needed                                    | Cost                     | Unfamiliar, would be interested           |
| General<br>Trucking           | 400   | 3                    | Purchase 25 new<br>trucks per year, lease<br>25 new trucks per year | None                     | Yes, participated in VT                   |
| Bulk Hauling                  | 16  | 15                   | None  | None                     | Yes, participated through Providence Port |
| Gasoline<br>Tanker<br>Company | 25  | 5                    | 1 truck yearly  | Availability and cost    | Did not answer                            |
| Metal<br>Recycling            | 12  | 6                    | Did not answer  | Did not answer           | Did not answer                            |
| Chemical<br>Distribution      | 24  | 4                    | Yes   | None                     | Yes                                       |

Truck Replacement Policies, Purchasing Challenges, and Incentive Programs

## Interview Results – Port Business and Fleet Manager Interviews

- Suggestions to improve port efficiency/air quality included:
  - Limit weight restrictions to minimize truck trips
  - Further adoption of automated swipe-in systems for truck drivers
  - Implementation of TWIC Express Lane
- Two companies stated that they did not see a need for increasing truck parking or staging at the port

- 61 Drivers Interviewed (14 Owner/Operators)
- Truck ages ranged from new to 22 years
  - Average age was 9 years
- Larger truck fleets corresponded with younger trucks based on the interview sample

| Truck Age<br>(years) | Trucks<br>Recorded | Median<br>Fleet Size | Largest<br>Fleet Size | Smallest<br>Fleet Size |
|----------------------|--------------------|----------------------|-----------------------|------------------------|
| 0-5                  | 29                 | 19                   | 186                   | 1                      |
| 6-10                 | 2                  | 9                    | 17                    | 1                      |
| 11-15                | 11                 | 5                    | 51                    | 1                      |
| 16-20                | 8                  | 2                    | 16                    | 1                      |
| 20+                  | 2                  | 6                    | 8                     | 3                      |

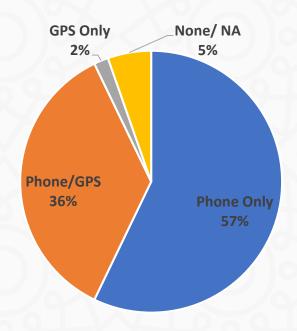

**Driver Interviewee Truck Age and Fleet Size** 

- Owner/Operators' trucks range 1 to 20 years in age
- Owner/operators were most prevalent at the auto export terminal during the interview period
- 3-5 trips to the port per week for car transporters
- 5-10 trips to the port per week for bulk transports

| Duration of<br>Truck<br>Ownership | Replacement<br>Schedule<br>Miles/Years | New or Used<br>Replacement | Why<br>Used? | Subsidy<br>Required /<br>Desired | Trips to<br>Port per<br>Week | Model/Year<br>of Truck | Truck Body<br>Type |

#### **Owner/Operator Interview Results**

- 68% of trips were round trips that began and ended at the same location, with an intermediate stop at the port
- All drivers had an empty haul for one leg of the trip
- All but one driver stated they do not idle longer than five minutes
- The majority of drivers indicated that they use a smartphone as their primary navigation aid

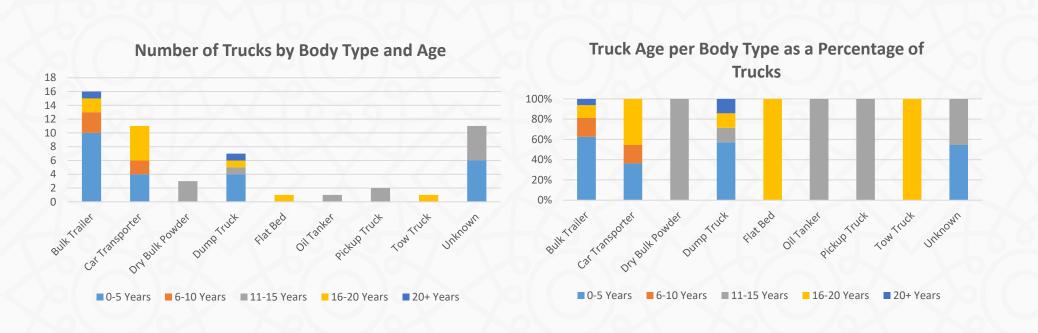

**Interviewee Navigation Aids** 

- Interviewees made anywhere from 1 trip per week to 45 trips per week to the port
- Average trips per week per driver was between 9 and 11 trips
  - Median trips per week per driver was 5 trips
- Most drivers interviewed return to the port multiple times per week

| 1) (a/> | ()o(()  | Percentage of |
|---------|---------|---------------|
| Trips   | Drivers | Drivers       |
| 1-5     | 18      | 33%           |
| 5-10    | 26      | 47%           |
| 10-20   | 5       | 9%            |
| 20+     | 6       | 11%           |
| Total   | 55      | 100%          |

**Trips to Providence Port Area per Week** 

- Bulk cargo and car transporter drivers were the most commonly interviewed drivers
- Bulk trailers and dump trucks tended to be the newest vehicles,
   while car transporters tended to be older.

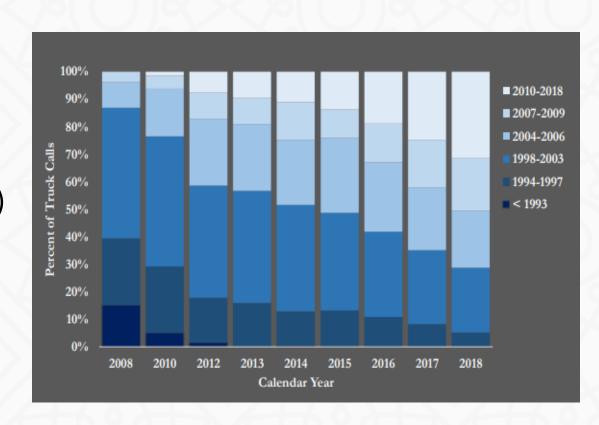

## **Possible Strategies**

- Reducing the Number of Older Trucks
- Truck Management Initiatives
- Efficiency
- Environmental Credentials
- Truck Intrusion

## Possible Strategies – Reduce Number of Older Trucks

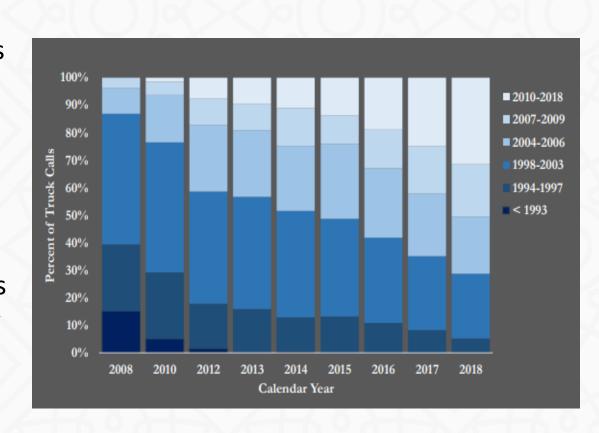

- Why is replacing older trucks a strategy?
- Vehicle emission standards have become more stringent
  - Exhaust after treatment technology
  - Diesel Particulate Filters (DPF)
  - Selective Catalytic Reduction (SCR)
- Truck Model Year
  - >2010. Trucks equipped with both DPF and SCR
  - 2007-2009. DPF but not SCR
  - Pre 2007. No DPF or SCR

Source: PANYNJ 2018 Multi-Facility Emissions Inventory

## Possible Strategies - Reduce Number of Older Trucks

- Natural evolution to less polluting models over time
  - Average age of Class 8 truck is 6 ½ years.
- Inherent challenges accelerating the take up of newer trucks
  - Small companies/owner operator
  - Truck Cost Ave price of Class
     8 \$38k for a used truck, new
     \$113k
  - Lease vs. purchase
    - Side benefit of leasing is truck turnover

Source: PANYNJ 2018 Multi-Facility Emissions Inventory

## Possible Strategies – Truck Management

- Vehicle Booking Systems
  - Objective Align port processing capacity with truck arrivals
  - Widespread in container terminals
  - Not so in bulk facilities
- Truck Queuing/Staging Areas
  - Dedicated facility, combined with call forward system
  - Where could a facility be located? Does demand justify this?

Corpus Christi Truck Staging Area

# Possible Strategies – Truck Operations Efficiency

- Improve Truck Efficiency
  - Dual Transaction/Matchback/Street turn/Load Matching
  - Reduce empty truck miles and truck trips

## Possible Strategies – Truck Operations Efficiency

- Some traction in container sector
- Benefits reduce costs and number of trucks entering ports
- Requires management time and effort
- Co-ordination with customers and transporters
- Providence Port Area challenges
  - Origin, destination of trips
  - Seasonality and Discharge profiles
  - Commodities and vehicle type
    - Outgoing petroleum tanker incoming scrap metal

X

Outgoing salt – incoming scrap metal

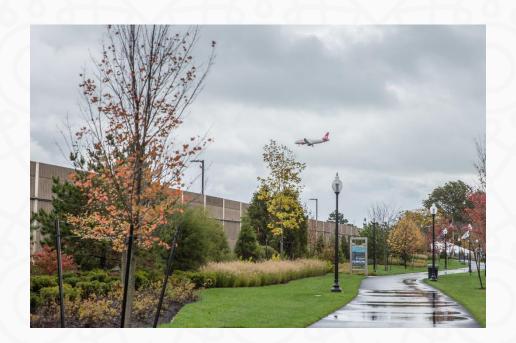

# Possible Strategies – Truck Intrusion

- Measures to avoid/mitigate truck intrusion in neighborhoods
  - Truck Route Network
  - Defines routes
  - Doesn't exclude trucks for making deliveries
  - Separate trucks and vulnerable road users
  - Provides a mechanism for enforcement for off route trucks

# Possible Strategies – Truck Intrusion

- Measures to avoid/mitigate truck intrusion in neighborhoods
  - Bypass/Truck Corridors
    - Direct Access to I-95 SB?
  - Boston: dedicated Freight Corridor and Thomas J. Butler Memorial Park
  - Park provides a buffer between truck route and residential areas

# Possible Strategies – Green, Environmental Schemes and Credentials

- Increase the uptake of voluntary green/environmental schemes
  - EPA SmartWay for carriers, shippers/receivers, and trucks
  - Green Marine air emissions criteria
  - Incentivize use of existing schemes for the port's carriers
  - Work with Parties in the supply chain
    - Use public procurement e.g., Boston City contracts and truck sideguards

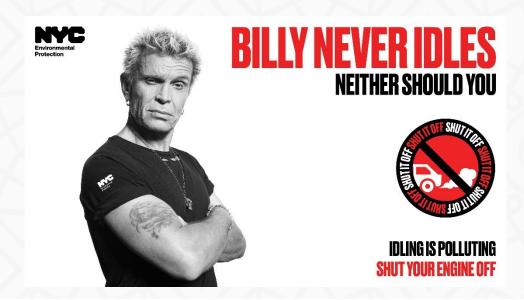

## Possible Strategies – Anti-Idling

- Two primary approaches to addressing idling:
  - Technology/Opportunity (is it possible to idle?)
    - Auxiliary Power Units can eliminate long-term idling
    - Idle limiters shut off engine after preset time
    - Scheduling can limit downtime
  - Behavior (does a driver choose to idle?)
    - Can address via enforcement or training
    - NYC has deputized citizens to cite trucks/buses

No idling more than 3 minutes! Exceptions: emergency vehicles or vehicles operating necessary machinery.

No idling for more than 1 minute around a public or private school.

## **Conclusions and Next Steps**

- The Providence Port Area primarily serves bulk cargo and petroleum products and trucking observed in Phase I reflects this
- Most port businesses do not own or operate their own trucks
- Potential strategies require working with businesses, truckers, or government depending on the level of intervention
- The Project Team will continue performing/summarizing outstanding interviews (through the finalization of the report)
- The Project Team will continue tweaking potential strategies based on further analysis of the interview results (through the finalization of the report)
