

# Maersk LinePilot Fuel Switch InitiativeAPM TerminalsNew Portsmouth VA Marine Terminal

Lee Kindberg Director, Environment 18 June 2008

## Maersk West Coast Air Quality Initiative

#### Voluntary program reduces air emissions

From Bunker, avg. 2.5% sulfur To Distillate, avg. 0.1% sulfur

## California:

- Auxiliary 24nm from coast
  - Voluntary to <0.2%
  - More than complied with CA aux. engine rule
- Main engine 24nm from port

## Vancouver & Tacoma:

- Voluntary
- Low sulfur fuel while at dock

Mærsk Mc-Kinney Møller stands on the dock at Pier 400 in Los Angeles with the Sine Maersk at berth behind him. The vessel was the first to perform a fuel switch as part of a Maersk Line pilot environmental initiative in California.

## **Vessel Fuel Switch**

- →Why Take This Step?
- Emissions Reductions
- →Program Status and Statistics
- Engine Types Maersk Owned Vessels
- Fuels Carried Onboard and Fuel Availability
- →Program Costs
- →Crew Training
- →Challenges
- Current Emissions Reduction Initiatives
- →Contact Details

## **Applicability**

Main & Auxiliary Engines change from 'bunker' fuel to distillate fuel (LSDO) with sulfur content below 0.2%

### →All Maersk vessels calling California

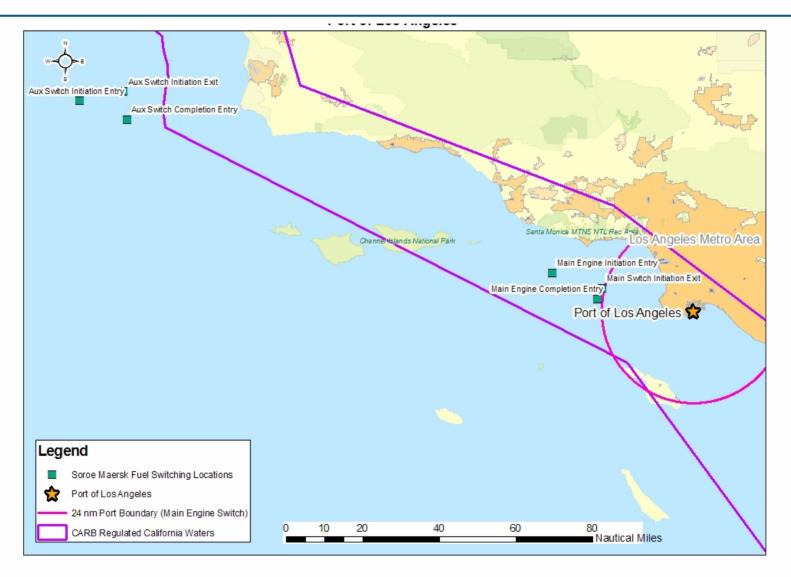

- →In and outbound
  - →24 NM from arrival port for main engine
  - →24NM from California baseline (RCW) for auxiliary engines (may be much farther from port)
- ➔In Port
- →Phase-in started with Sine Maersk March 31, 2006

All vessels at dock in Vancouver and Tacoma
 Started in 2007

MAERSK

#### Maersk and APMT Environmental Initiatives

### Reasons

- Maersk Line's response to increased pressure to install Cold Ironing
- Immediate emission reductions for the Ports of Los Angeles & Oakland
- → Mobile solution, rapid implementation
- No expensive shore infrastructure required

 Uelcome
 Safety

 Pier
 400
 Job #1

 API Terminals
 API Terminals

- → Does not shift emissions to other power sources or locations
- Part of Maersk's ongoing evaluation of initiatives for environmentally responsible operation

## **Emissions Reductions**

→760 tons vessel-related emission reductions annually with over 1100 tons reduced through 31 Dec 07 Percent Emission Reductions

Maersk Initiative

→SOx 95 %
→PM 86 %
→NOx 11 %

Data based on Year 2007 Vessel Calls at Los Angeles and Oakland Ports

NAM HSEQ

· · · · · · · · · · · · · · · · · · ·	
Number of vessels	105 different vessels (through 31 Dec 07)
	Owned and charter participate.
Number port calls with fuel switching	577 reported fuel switches
	(2 Apr 06 - 31 Dec 07)
Consumption of LSDO per Switch – Main & Auxiliary Engines	27.3 MT (Based on fuel consumption 02 Apr 06 – 31 Dec 07)
Fuel sulfur content	averages: HFO 2.50% S
	LSDO 0.13% S (0.09% recently)
Reductions Achieved compared to burning Residual Fuels	<b>Total Emissions:</b> Approx. 1130 tons through December 31, 2007
	<b>PM:</b> 86%
	<b>SOx:</b> 95%
	<b>NOx:</b> 11% (from NOx-Reduction mode in Auxiliary Engines)
	Data analysis by ENVIRON .

## Main Engines – Maersk Owned Vessels

- →MAN B&W
   →12K90MC
   →10K90MC-C
- →Sulzer Wartzila
  →12RTA96C
  →12RT-flex96C
  →9RTA84C

## Auxiliary Engines – Maersk Owned Vessels

- →MAN B&W
  →Holeby 7L32/40
  →Holeby 8L28/32
  →Hyundai 8L27/38
- →Sulzer Wartzila →6R32E
- →Daihatsu →6DK-32
- →MAK Caterpillar →6M32C

## **Fuels Carried Onboard**

- →Residual Fuels
  - →RMH 380 / 700
  - →RMK 380 / 700
- →Distillate Fuels
  - →DMX for Emergency Generator & Lifeboat Engines
  - →DMA
  - →DMB
- Initially MGO was used for the switch; vessels are now allowed to use MDO grade DMB.
- Vessels are equipped with separate service tanks for Residual and Distillate fuels

## LSDO Availability (as of fall 2007)

- →Sourcing is handled globally by Maersk Bunker
- →US West Coast
  - →Mainly Los Angeles & Oakland
  - →No Problems in sourcing
  - →Good Quality Inland Distillate
  - →Main Supplier Chemoil Approx. 80% Volume Price Driven
  - →Average Stem 200 MT

→Far East

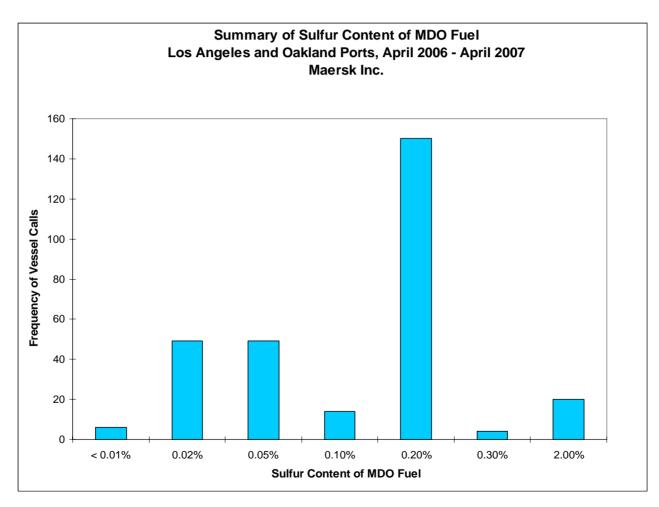

- →Japan Available Expensive
- →Singapore / Hongkong Difficult to source

→Europe

→Rotterdam – Difficult to source – Expensive when available

#### **Fuel Switching Summary**

## **Crew Training**

Crew advised to follow change over procedure as per engine manufacturer instructions

Change over considered 'Normal Engineering Practice'

- →No special training provided
- Maersk crews are trained to ISO 14001 Environmental Management Systems

PAGE 16

Maersk and APMT Environmental Initiatives

## Challenges

No significant problems encountered to date on vessels due to fuel switch.

→Care required in switching

→Engines run on LSDO for short periods of time

→Some fuel pump issues

In case of longer running, manufacturers suggest change over of cylinder lubrication oil with lower base number.

Timely data collection was especially challenging in the early months, and still represents a challenge.

## **Costs and Implementation**

- No capital investment required vessel or port
- Rapid implementation (weeks vs. years)
- No personnel safety or training issues

BUT:

→Fuel cost differential is substantial

MAEPISK LINE

→Some care needed in switching

## **Current Emission Reduction Initiatives**

- →Slide valves
  - MAN main engines
  - Improves the combustion process
  - Reduces visible smoke and PM
  - Less maintenance
  - → (less fuel oil consumption/CO2 emisson)

### →SIP cylinder lubrication system

- Reduces cylinder oil consumption
- → Reduces PM emission

#### →Waste Heat Recovery system

- → 10% more mechanical energy output
- Large and complex installation
- → 10% reduction in all emissions; SOx, PM, NOx & CO2
- Hot exhaust gas -> steam -> electricity -> electric motors

## **Current Emission Reduction Initiatives**

#### →Electronically controlled injection in engines

- Improved combustion in low-load condition
- No visible smoke less PM emission
- Less fuel oil consumption due to better combustion

#### →Voyage Efficiency System

- Sharing of sea current data between ships
- Voyage optimization based on input from MET services, sea current and other sources
- Less fuel oil consumption due to less distance traveled at high speed

### →Maersk Ship Performance System

- Monitor propeller and hull efficiency
- Optimize hull and propeller cleaning intervals
- Monitor trim optimization
- → Monitor engine performance

## **Current Emission Reduction Initiatives**

#### Selective Catalytic Reduction

- Test installation on one aux. engine in one ship
- Monitored with regard to efficiency in port areas / low load situations
- Mixed results in combination with low-sulphur distillate operation

#### Emission & Energy Saving Project

- Identification of areas where fuel can be saved by optimization of processes
- Significant savings obtained by monitoring buffer time build up during transit

Maersk and APMT Environmental Initiatives

## APM Terminals Marine Terminal – Portsmouth Virginia A Roadmap To The Future

PAGE 23

Maersk and APMT Environmental Initiatives

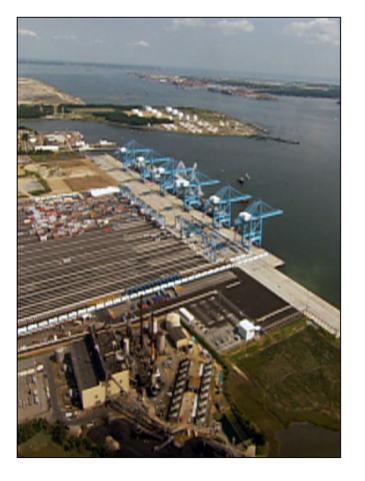

## **APM Terminals Virginia**

- ➤Largest privately owned marine terminal in North America
- ➢A marriage of technological innovation and environmental stewardship
- A partnership with local, state and federal agencies along with surrounding communities
- ➢Will bring an estimated \$6.4 billion dollars into Portsmouth and surrounding communities over next 15 years

### **Engineering Highlights**

- ≥291-acre facility sits along Virginia's historic Elizabeth River
- ➤1 million TEUs per year, expandable to 2 million
- ➢Crane fleet features 6 post-panamax, can support up to 12
- ➤30 rail-mounted, remote-controlled gantries
- ➢On-site rail yard has six tracks, also expandable to 12
- Direct access from main highway (no impact to neighborhoods)

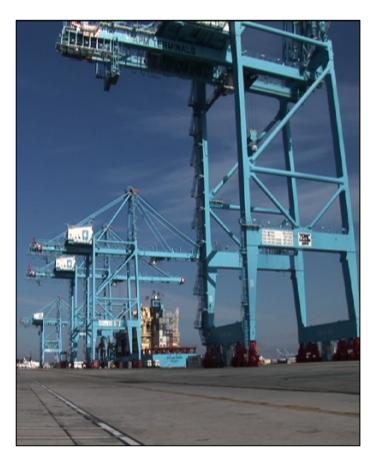

PAGE 25

Maersk and APMT Environmental Initiatives

#### **Technological Achievements**

## Here's a closer look at some of the innovative and energy efficient uses of technology in Virginia...

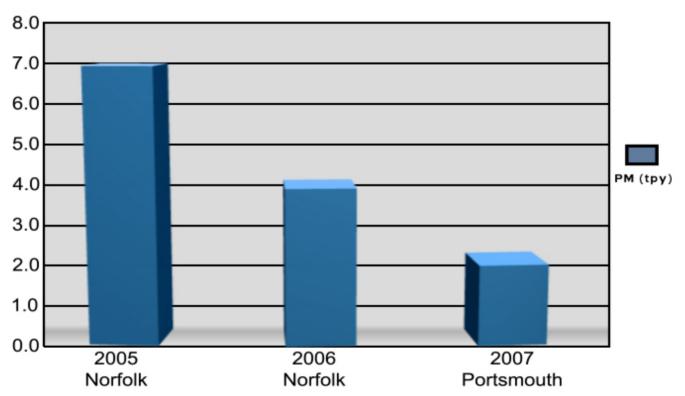

#### How We Reduced Emissions

- Electrified ship-to-shore cranes
- ➢Automated electric RMGs
- Improved container management and logistics
- ➢Use of yard trucks that meet 2010 emission standards
- ➢Use of ultra low sulfur diesel fuel for container handling equipment
- ≻40-acre on-dock rail yard

#### **Reduced PM Emissions**

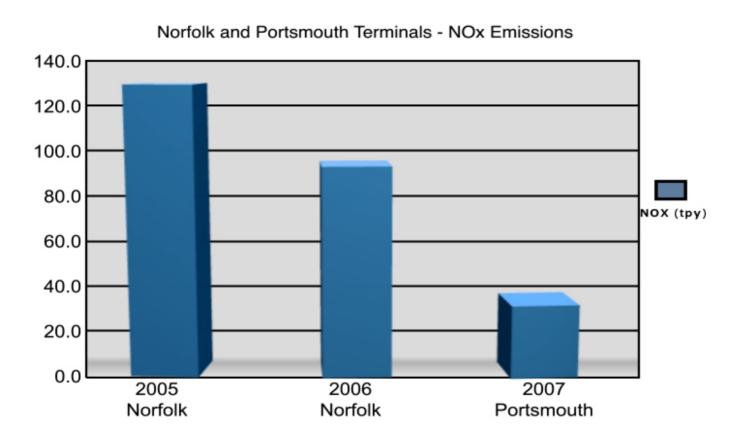

Norfolk and Portsmouth Terminals - Particulate Matter Emissions

PAGE 28

Maersk and APMT Environmental Initiatives

#### **Reduced NOx Emissions**

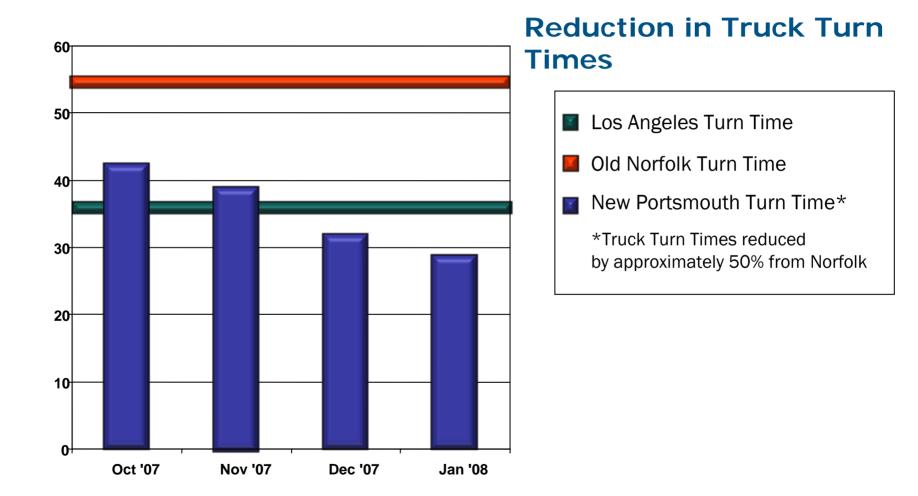

#### How We Reduced Emissions

- Electrified ship-to-shore cranes
- ➢Automated electric RMGs
- Improved container management and logistics
- ➢Use of yard trucks that meet 2010 emission standards
- ➢Use of ultra low sulfur diesel fuel for container handling equipment
- ≻40-acre, on-dock rail yard
- ➢Use of RFID technology to reduce queue and idle times for OTR

#### Partnerships—The Real Way To Success

Key collaborations with local, state and federal agencies helped to "fast track" our environmental protection plan

- Army Corps of Engineers
- Virginia's Department of Game and Inland Fisheries
- >U.S. Coast Guard
- Virginia's Department of Environmental Quality
- ➢Governor of Virginia
- >Mayor of Portsmouth
- Local Communities
- Elizabeth River Project
- Regional Native American Leaders

#### **Our Commitment To The Environment**

Elizabeth River Project identified restoring healthy river bottom habitats as their highest priority

➢Voluntarily established the \$5 million dollar "Living River Restoration Trust" to clean and repair endangered sections of the river

➤Trust created a 13-acre oyster reef

➢Created 17 acres of tidal wetlands and purchased 13 acres of non-tidal wetland credits

➢Permanently conserving 110-acre green belt around the facility
